Collaboration/connection with animal transporters.

### MVP

**Problem1:** In the month I entrust my pet, they have their vaccinations. Can a veterinarian be vaccinated by my entrusted person?

Target Audience: Those who want to own their pet, who want to entrust their pet.

Potential Concerns: The entrusted pet is not vaccinated within the entrusted time frame.

Solution: Collaborate with a veterinarian. As long as the pet owner wishes, to control the vaccinations and general care of the owned or entrusted pets by a veterinarian with whom we cooperate.

Problem2: Even though the pet owner lives in the same city as the person to whom he/she will entrust his/her pet or the person he/she wants to adopt, our company wants to send his/her pet via courier.

Target Audience: Those who want to own their pet, who want to entrust their pet.

Potential Concerns: Any inconvenience during transportation.

Solution: Transport to districts other than the specified district by establishing cooperation/connection with animal carriers.

**PSI** (as we understand)
