PROJECT PROPOSAL

What is the purpose of using the system? Who and how will they use system?

Our project is a website. Its name is [Look at the sky](#). Its purpose is for astrologers who are interested in fortune-telling and people who are interested in astrology. Users who want to use this website will be able to log in as a guest or as a member.

What is the general function of the system and what will the system do? How will it help users do their job?

The system will be regularly updated every week. Users who log in will be able to observe the characteristics of their sign and the effect of the sky on people, and they will be able to access weekly horoscope comments, relationship compatibility between signs, and financial and health problems that may occur. Members will be able to convey their suggestions and complaints to the system administrators at any time by using the comment button.

What are the main components of the system? Divide the system into logical or architectural components and explain the main reason for this separation?

Logical components relate to user interface, so it is about platform visible part by user and architectural components are about where data is stored.

Architectural: A SQL-based system will be designed to manage the complexity of the system and maintain its integrity.

There are 3 main classes in our system: user, home, contact and game.

Logical: The system will be created using Html, Css and Javascript.

- **User:**
Login: User logs in the system.
Logout: User logs out of the system.
Registration: New members register.
- **Home:**
Learn zodiac sign: User learns her/his zodiac sign.
- **Contact:**
Comment: User messages to admin for complaints.
- **Game:**
Play: User plays Sixth-Sense Game.
